I. METHODOLOGY

A. Warm-up

- Brief description of how the warm-up period is determined.

B. Measurements

- Brief description of how the time performance is measured.

C. Comparison

- Brief description of how the implementations are compared.

II. MACHINE SPECIFICATION

- CPU, memory, OS, etc.
- JVM parameters if used.

III. RESULTS

A. Warm-up

- Results of the warm-up determination (with graphs) with a summary table.

B. Measurements

- Results of the time measurements including a graph with displayed confidence intervals and a table.

C. Comparison

- Results of the comparison of the implementations.

IV. CONCLUSION

- Summary of the results with a discussion
